Topic: Practical Introduction to Change and Configuration Management

This course teaches a **basic understanding of Configuration Management** using a **practical example**, i.e. the participants have the opportunity to try out specifics of what they have learned in a project and experience the **effects** of it. The participants work in teams in order to experience the **Configuration Management activities as realistically as possible**. The example simulates essential parts of the product life cycle.

Short lecture blocks provide the theoretical knowledge necessary for the next step. Sufficient discussion time ensures an in-depth understanding.

Seminar Workshop
